

Aloha Chair Gabbard and members of the Committee on Safety, Economic Development and Government Affairs.

I oppose resolution 12-57 regarding the labeling of foods that are Genetically Engineered.

The labeling of all organic products to warn the consumer that the product may contain parasites that cause rat lungworm disease, could contain E. Coli bacteria or the bacteria that causes Salmonella poisoning should also be required.

These diseases can kill an individual, and we have the right to know if the organic products are free of these diseases.

I may agree to the labeling of products containing Genetically Engineered food products.

Thank You.
